

STUDYGATCHI

anthony le | andres de la flor
anthony thisse | lexline johnson

the premise

-> earned by being on task, spend on gacha

gamble for your faves (goober accessories, furniture, etc)!!! \$\$\$

What Is Studygatchi?

- studying + gacha/gambling + Tamagotchi
 - You have a little goober that you feed by completing tasks
 - Completing tasks also gives you bonus points you can use to roll for accessories
 - If you stay off-task and don't complete, your pet dies

What is Studygatchi?

- studying + gacha/gambling + Tamagotchi
 - You will be able to add your own tasks into Studygatchi directly or sync with Google Calendar (maybe even Canvas API?)
 - Will have methods to stop people from farming tasks, i.e. making a task and immediately marking as complete for free points
 - UGC system where users can submit items to add to the gacha/marketplace

Why Studygatchi?

- Essentially want to gamify studying/completing tasks
- Help develop and engrain study methodologies like the pomodoro method
- Also we had to have some gambling bc this is OSC

Tech Stack!

- Chromium extension
- Still in process of deciding stack
 - For backend we will use Django (Python) ORM with Postgres (relational DB)
 - For frontend we're looking at something like React and Tailwind
 - ...But this is somewhere that you guys can contribute! (if ur a frontend person that's super cool)

VALUE!!!

- Develop skills from scratch by building a project bottom up!
 - Opportunities for frontend, backend, database, etc.
- Learn awesome graphic design skills from ur fav merch ~~slave~~ designer
 - (He couldn't make it but he's here in spirit bc he made this slide!!!)
- Opportunity to expand to a larger scale website (marketplace, ugc content, house) and maybe hardware elements (let's build a tamagotchi guys)
- Everyone is super silly awesome amazing :D
- PATS
